DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 1. Determining the scope and contents of the prior art.
 2. Ascertaining the differences between the prior art and the claims at issue.
 3. Resolving the level of ordinary skill in the pertinent art.
 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
3. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tahara et al. US 2002/0026003 in view of Corvasce et al. US 5,672,639.
4. The rejection set forth in the action mailed 9/6/05 is deemed proper and is herein repeated.

Response to Arguments

Applicants point out that Tahara et al. identifies the Moh's hardness of the particles as being 6.5 and fails to exemplify particles having a Moh's hardness of greater than 3. This is argued as being distinct from the claimed subject matter wherein the Moh's hardness of the particles is limited to "at least 5" and "6 to 8" in claim 9. This is not persuasive. There is a clear overlap in the scope of the claims relative to the prior art. There is sufficient suggestion in the patent i.e., "not more than 6.5" to motivate one

Art Unit: 1713

of ordinary skill to use particles having hardness of greater than 5 and/or 6. As such the claims are prima facie obvious.

The allegation of unexpected results and the relevant portions of the specification have been fully considered. There is no showing which compares the closest prior art with the scope of the claimed invention. The showing in the specification is limited to the emery specie of particle. There is no comparison of particles having differing Moh's hardness. Further, the claims are not limited to particles having a greater hardness than that of the glass fibers. This is identified in the remarks as being the inventive feature of the invention. There is no showing which supports this allegation.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
